Key Facts: Coronary heart disease is responsible for more than 1 in 5 deaths in this authority, and nearly 1 in 4 of all premature deaths. In this authority deaths from heart disease are lower than nationally. As CHD disproportionately affects people on low incomes, one would expect higher than average rates of death within the more deprived parts of the authority. The highest rates were observed in Bridlington North, Goole, and Boothferry West, although these differences are not statistically significant. See definitions for data sources and health warnings.
